28th September 2026

To whom it may concern,

I am pleased to provide this academic reference for Aanchala Ravindra Bhongade, who completed her MSc dissertation project, "Length Generalisation in Transformer-Based Sequence Models: Failure Taxonomy and Mitigation Strategies" under my supervision.

Throughout the project, Aanchala showed herself to be responsible, hard-working, and professionally committed. She approached her work with care and engaged constructively with the challenges of a technically demanding topic.

Based on my interactions with Aanchala, I am happy to support her applications for suitable future academic or professional opportunities. I believe she would be a valuable and conscientious candidate.

Yours sincerely,

Fernando Moreno-Pino,
University of Bristol
